Carbon Reporting Methodology

Emissions were calculated following the GHG Reporting Protocol (Corporate Standard) using the Watershed platform. Energy usage data was collected or estimated based on building square-footage for all facilities, and was combined with emissions factors from the US Environmental Protection Agency, Ecoinvent, The Climate Registry, and other data sources to calculate GHG emissions. Electricity emissions factors are chosen based on geography to reflect the emissions intensities of the facilities' local grid.

Energy Efficiency Measures

Squareup Europe Limited's UK office space has energy efficiency systems in place including all LED lighting and a controllable heating and cooling system which allows for optimized energy consumption.
